

# HOSSEIN KAVAND

## Front End Developer

### PROFILE

A Front End Developer with +7 years of experiences in writing high-quality code and delivering it to client. I am a self thought developer, I started learning from scratch.

I constantly update myself with new methods and challenge myself with new stacks, I love sharing my knowledge with other people. In last few years, I think more than 3 interns getting into programming and building their careers. I also love working with passionate and professional people to learn from them and improve myself in any way possible.

I have been learning Python as a new Programming language. I am also open to learning new technologies.

Teamwork is one of the most important aspects of software development and I worked almost all of my career as a part of a team or as a leader, my goal is to match with a team in short time. In my opinion, programming is not just about a list of skill sets, mindset is more important, it helps you in every way, it can help you lead team in the right way, confronted challenges more easily, and communicate with your colleagues better.
